

# Pest Prevention

Rodents and insects can carry disease and contaminate food. A thorough pest control plan can help prevent infestations.

## Educate staff

- Teach the signs of an infestation.
- Clean up spills quickly.
- Sweep and mop daily.

## Track Inventory

- Inspect inventory before putting it away.
- Rotate inventory frequently.
- Use First in First Out.

## Check outside

- Look for signs of rodents around dumpsters.
- Keep the area around dumpsters clean.
- Seal window and door gaps.

## Regular control

- Schedule regular pest control appointments.
- Call your pest control company if you think there is an infestation.
